

Last fall Mr. Reed told us students that he had ordered a greenhouse. Victor Gonzalez, my brother Jose and I were chosen to help put it together. Although it looked like it would be easy, it was harder than we thought. It took us about a month to assemble it. We leveled the ground. We dug holes for the cement blocks. We fastened two by 8's onto the base to support the walls. After that we put the walls together. At first it was hard to work with the letter-coded parts, but after a while we got the hang of it. After the walls, we did the ceiling. Then we had problems with the windows. They were different sizes and we didn't realize that. Mr. Reed helped us fix it. After it was all done, we installed shelves inside. The hardest part of the whole project was doing the door. It was crooked and we had to make some adjustments.

Now that it's done, all of us feel pretty proud of it. It was a good experience, and it feels good to do something good for the school. It will be there long after we're gone.
